Breach: true

Name: Adobe

Website: adobe.com

Bio: In October 2013, 153 million Adobe accounts were breached with each containing an internal ID, username, email, *encrypted* password and a password hint in plain text. The password cryptography was poorly done and many were quickly resolved back to plain text. The unencrypted hints also [disclosed much about the passwords](#) adding further to the risk that hundreds of millions of Adobe customers already faced.

Creation Date: 2013-10-04T00:00:00

Registered: true

Breach: true

Name: Anti Public Combo List

Bio: In December 2016, a huge list of email address and password pairs appeared in a "combo list" referred to as "Anti Public". The list contained 458 million unique email addresses, many with multiple different passwords hacked from various online systems. The list was broadly circulated and used for "credential stuffing", that is attackers employ it in an attempt to identify other online systems where the account owner had reused their password. For detailed background on this incident, read [Password reuse, credential stuffing and another billion records in Have I Been Pwned](#).

Creation Date: 2016-12-16T00:00:00

Registered: true

Breach: true

Name: Collection #1

Bio: In January 2019, a large collection of credential stuffing lists (combinations of email addresses and passwords used to hijack accounts on other services) was discovered being distributed on a popular hacking forum. The data contained almost *2.7 billion* records including 773 million unique email addresses alongside passwords those addresses had used on other breached services. Full details on the incident and how to search the breached passwords are provided in the blog post [The 773 Million Record "Collection #1" Data Breach](#).

Creation Date: 2019-01-07T00:00:00

Registered: true

Breach: true

Name: Epik

Website: epik.com

Bio: In September 2021, [the domain registrar and web host Epik suffered a significant data breach](#), allegedly in retaliation for hosting alt-right websites. The breach exposed a huge volume of data not just of Epik customers, but also scraped WHOIS records belonging to individuals and organisations who were not Epik customers. The data included over 15 million unique email addresses (including anonymised versions for domain privacy), names, phone numbers, physical addresses, purchases and passwords stored in various formats.

Creation Date: 2021-09-13T00:00:00

Registered: true

Breach: true

Name: Gravatar

Website: gravatar.com

Bio: In October 2020, [a security researcher published a technique for scraping large volumes of data from Gravatar, the service for providing globally unique avatars](#). 167 million names, usernames and MD5 hashes of email addresses used to reference users' avatars were subsequently scraped and distributed within the hacking community. 114 million of the MD5 hashes were cracked and distributed alongside the source hash, thus disclosing the original email address and accompanying data. Following the impacted email addresses being searchable in HIBP, [Gravatar release an FAQ detailing the incident](#).

Creation Date: 2020-10-03T00:00:00

Registered: true

Breach: true

Name: Kickstarter

Website: kickstarter.com

Bio: In February 2014, the crowdfunding platform [Kickstarter announced they'd suffered a data breach](#). The breach contained almost 5.2 million unique email addresses, usernames and salted SHA1 hashes of passwords.
